

THE ASSURANCE PLATFORM FOR REGULATED SECTORS

One project record, from first risk analysis to final report.

AIS runs the entire assurance lifecycle in one structured workspace — replacing the scattered docs, spreadsheets and inboxes that never reconcile at report time.

AIS is not a chatbot — it is a structured security assurance platform with AI embedded.

THE PROBLEM

Audit work fragments across documents, spreadsheets, email and drives. Everything is reconciled by hand, outputs drift out of sync, and the highest risk of error lands exactly when the deadline does — leaving conclusions hard to defend under pressure.

THE SOLUTION

AIS holds scope, controls, risks, findings and evidence in **one project record**. Data entered once flows to every output — no re-keying, no drift — and every conclusion stays traceable to the evidence behind it, so the result is **defensible by design**.

BENEFITS

Win time

No re-keying, drafts on demand, reports that assemble from the live record.

Win quality

One scoring method, evidence linked to every conclusion, defensible outputs.

Win confidence

Governance, audit history and role-based access make every output reviewable.

USE CASES — ONE RECORD, EVERY OUTPUT

Security Risk Assessment

Control Validation

C&A Memo

ATO Memo

Enterprise Architecture

Pentest scoping

Findings registry

Portfolio dashboards

Your environment → **AIS structures it into one project record** → Every assurance output

Outputs stay consistent across assessments

No rework at the reporting stage

Everything reconciles at report time

The AI is an accelerator. AIS is the product.

AI-assisted, human-led — AIS drafts and flags, the auditor decides, and every conclusion stays traceable and defensible.
